

# Stolen R6 Motorcycle Reunited with Owner Within 4 Hours

Autometrics dispatched a radio finder and a speedy recovery was achieved despite the R6 being hidden down a rather scary and unlit alleyway, parked outside a restricted access sub station.

An Autometrics protected Yamaha YZF R6 Motorcycle was recovered undamaged within four hours.

On the 1st April 2014 Autometrics 24/7 received a call at 6PM from an anxious owner reporting his bike had been stolen from Kings Cross in London. All that remained was the **heavy duty security chain, cut through with a grinder.**

Radio signal finders, where required, can use a hand-held radio direction receiver to home in on the Autometrics MTrack audibly silent secret RF Radio Frequency.

The Autometrics MTrack Stolen Vehicle tracking system is the preferred choice for many bike owners as it is especially suited to the higher protection needs of motorcycles and scooters.

This unique tracking system has self powered or vehicle powered options.

The advanced three layer location technology enables any vehicle to be tracked and recovered even in the most challenging environments. Such as underground car parks, in the back of a van or inside a shipping container.

This remarkably quick find, returning a Yamaha R6 back to its rightful owner without any police involvement in less than 4 hours, further demonstrates why Autometrics' could reasonably claim to provide:

## The Ultimate Theft Recovery Service.

The owner had only purchased his new R6 a week earlier having recently transferred his Autometrics MTrack theft recovery device from his old bike.

In this instance the owner chose not to arm the Autometrics tracking units inbuilt motion sensor with his remote control. Had he armed the unit it would have alarmed in immediately and the owner would have been contacted. Instead an alarm message was sent to connect to the device on its wake cycle.

The system soon reported a search area indicating the bike was within a few miles of the theft site.

The finders who recovered the bike, did such a great job locating and wheeling it to safety. They remained on site with the R6 to protect it until the owner arrived to safely ride it home.

The owner was extremely happy to see the safe return of his bike without any major damage, the only obvious problem being a broken steering lock.

It would have been great had the police been able to use their rather tasty fast response machine photoed above. This similar police model was snapped at a recent BikeSafe event that Autometrics Sponsored.
