

# Stolen Yamaha R6 is Recovered for the Second time !

Official Police Security Indicator

## 2 X Stolen Yamaha R6's recovered

On 27 March 2015 a customer reported his R6 stolen for a second time in less than 12 months. Automatrix had already recovered this machine in April 2014. The Automatrix MTrack theft recovery tracking system was remotely alarmed and a radio signal finder was dispatched to Dagenham.

The radio signal finder detected the signal emanating from a private garden.

Support partners AVCIS (ACPO Vehicle Crime Intelligence Service) were contacted to help arrange attendance of the Metropolitan Police. Whilst the finder was waiting he witnessed a second (and later confirmed stolen) Yamaha R6 being wheeled through a gate of the target property.

The Metropolitan Police arrived and requested access to check the property garden. Access was granted, for the officers and the Automatrix finder.

The tracking device radio signal was confirmed as coming from a shed. Inside the shed were 2 x undamaged Yamaha R6 motorcycles and what appeared to be four bags of bike parts.

Radio signal finders, will where required, use hand-held radio direction receivers to pickup and then home-in on the Automatrix MTrack's audibly silent secret RF radio finding frequency.

It was clear this was a major motorcycle theft holding area which needed further investigation. AVCIS were again contacted and liased with the attending officers to arrange SOCA (Serious Organised Crime Agency) to attend the site.

SOCA officers arrived shortly after and took complete details including DNA samples.

The customer was then advised he could attend to collect his R6 from a street nearby whilst the Automatrix attending finder would be waiting for him.

Ultimately the Automatrix MTrack being self powered and covertly hidden was unaffected by the security systems attack.

The Automatrix MTrack Stolen Vehicle tracking system is the preferred choice for our somewhat relieved customer as it is especially suited to the higher protection needs of motorcycles and scooters.

This unique tracking system has self powered or vehicle powered options.

The advanced three layer location technology enables any vehicle to be tracked and recovered even in the most challenging environments. Such as underground car parks, in the back of a van or inside a shipping container.

This quick find, returning a R6 back to it's rightful owner **for a second time** demonstrates why Automatrix' could reasonably claim to provide:
