

Protected Hire Car Leads Police to 5 Stolen Vehicles

A stolen Range Rover Sport hire car is recovered undamaged within one hour of it being reported as stolen.

Automatrics received a call from clients at 7AM Saturday morning reporting that one of their highly valued Range Rovers had been stolen. The car was driven off using the vehicle keys taken from a residential burglary.

The finder, where required, can use a handheld radio direction tool to detect the Automatrics MTrack audibly silent secret radio frequency.

A speedy recovery was achieved by the finder despite the **car being hidden two floors below ground**, parked within a restricted access underground car park.

The Automatrics MTrack Stolen Vehicle tracking system is a preferred choice for many hire companies, as it is especially suited to the protection needs of high theft risk vehicles.

This unique tracking system has self powered and vehicle powered options.

The advanced and unique three layer location technology enables vehicles to be tracked and recovered in the most challenging of environments.

This remarkable find further endorses Automatrics' claim to provide the

Ultimate Security Tracking Service.

Automatrics 24/7 monitoring response staff immediately requested the tracker into alarm. The system soon reported a GSM map position indicating the Range Rover was stationary in small suburb of north west London.

However, a valid GPS position was proving extremely difficult to obtain, this meant a strong possibility that the culprit had used a GPS jamming device or that they had hidden the vehicle from satellite view.

An Automatrics radio signal finder was immediately dispatched to attend the search site.

The finder remained with the stolen vehicle for one hour until the Metropolitan Police arrived. The police were amazed at the tracking service performance considering the car hide location.

Attending officers instinctively began to check some of the other vehicles in the underground car park, they soon discovered **five other stolen vehicles**.

The Police are continuing investigations and are confident that the recovery of these six stolen vehicles will help crack a major car theft ring.
