Triple FOCUS

Mtrack innovation was highly praised by delegates who visited Thatcham's Triple Focus 08 event.

Triple Focus now in its fifth year, provides an excellent opportunity for Insurers and the security conscious to review the very latest Thatcham accredited security systems.

The National BikeSafe security advisor from Gloucestershire Constabulary Mark Godsland was interested to hear how mtrack could help motorcyclists.

Mr Godsland was advised that Mtrack systems could be easily armed via a wireless remote control or remotely by the 24/7 mtrack monitoring station.

Any movement would alarm the system, Mtrack can then report the location of a stolen motorcycle even if hidden inside a van or garage.

Mtrack was awarded Thatcham Quality Accreditation TQA 029 and TQA 030 for mtrackPro in March 2008.

Kevin Doel from Automatrics explained some of the firsts achieved by mtrack in Stolen Vehicle Recovery. (SVR).

Mtrack is the first accredited system to be entirely self powered and to employ phone cell ID location maps combined with UHF radio beacon location.

Mtrack is also the first system to use private finding agents SIA accredited First Security.

Paul Stockwell an expert vehicle security consultant who previously helped set up the requirements for Thatcham CAT1 and CAT2 apologised for having passed mtrack off as just another GPS based product.

"The mtrack technology appears to have real value as a tracking and asset monitoring technology"

Mtrack motorcycle suitability was again presented to motorcycle insurers Carole Nash, Harley Davidson and Triumph.

Mr. Stephen Coney, General Manager of the Vehicle Systems Installation Board was pleased to discover that mtrack customers requiring VSIB installation could choose accredited firm TrackNav.

Security representatives from several car manufactures also viewed the latest innovations from mtrack .

Mtrack visitors felt it important that proactive suppliers such as mtrack continued to develop and present the latest security advancements. This provides manufactures with technology choice ensuring services stay ahead of criminals.
